WE'RE MAKING OUR PACKAGING MORE SUSTAINABLE

We're transitioning from single-use plastic to paper-based packaging. As we progress, you may find a mix of paper and plastic in our boxes.

NOUS RENDONS NOS EMBALLAGES PLUS DURABLES

Nous passons des emballages en plastique à usage unique aux emballages à base de papier. Durant la transition, vous pourriez trouver un mélange de papier et de plastique dans nos boîtes.

QUEREMOS HACER MÁS SUSTENTABLES NUESTROS MATERIALES DE EMBALAJE

Estamos cambiando las bolsas de plástico desechables por bolsas con base de papel. Conforme avanzamos en este propósito, puedes encontrar una mezcla de papel y de plástico en nuestras cajas.

A GIANT OF SCIENCE AND CINEMA

The Triceratops is one of our most familiar dinosaurs, known from skeletons displayed in museums worldwide, and vividly brought to life in *Jurassic Park* (1993). In the movie, an ailing Triceratops is tenderly cared for by Dr. Ellie Sattler and the park's veterinarian, Dr. Gerry Harding. The scene reminded us that, hey, these awe-inspiring creatures were once real animals, thriving in their ancient world! Distinguished by its massive frill and three horns, the Triceratops' skull transformed as it grew: juvenile horns curved upward before shifting forward in adulthood, while the frill's triangular spikes fused into a solid edge. Fossil evidence even suggests that it could stand its ground against a T. rex! And now we proudly display our version in the LEGO® Jurassic World collection.

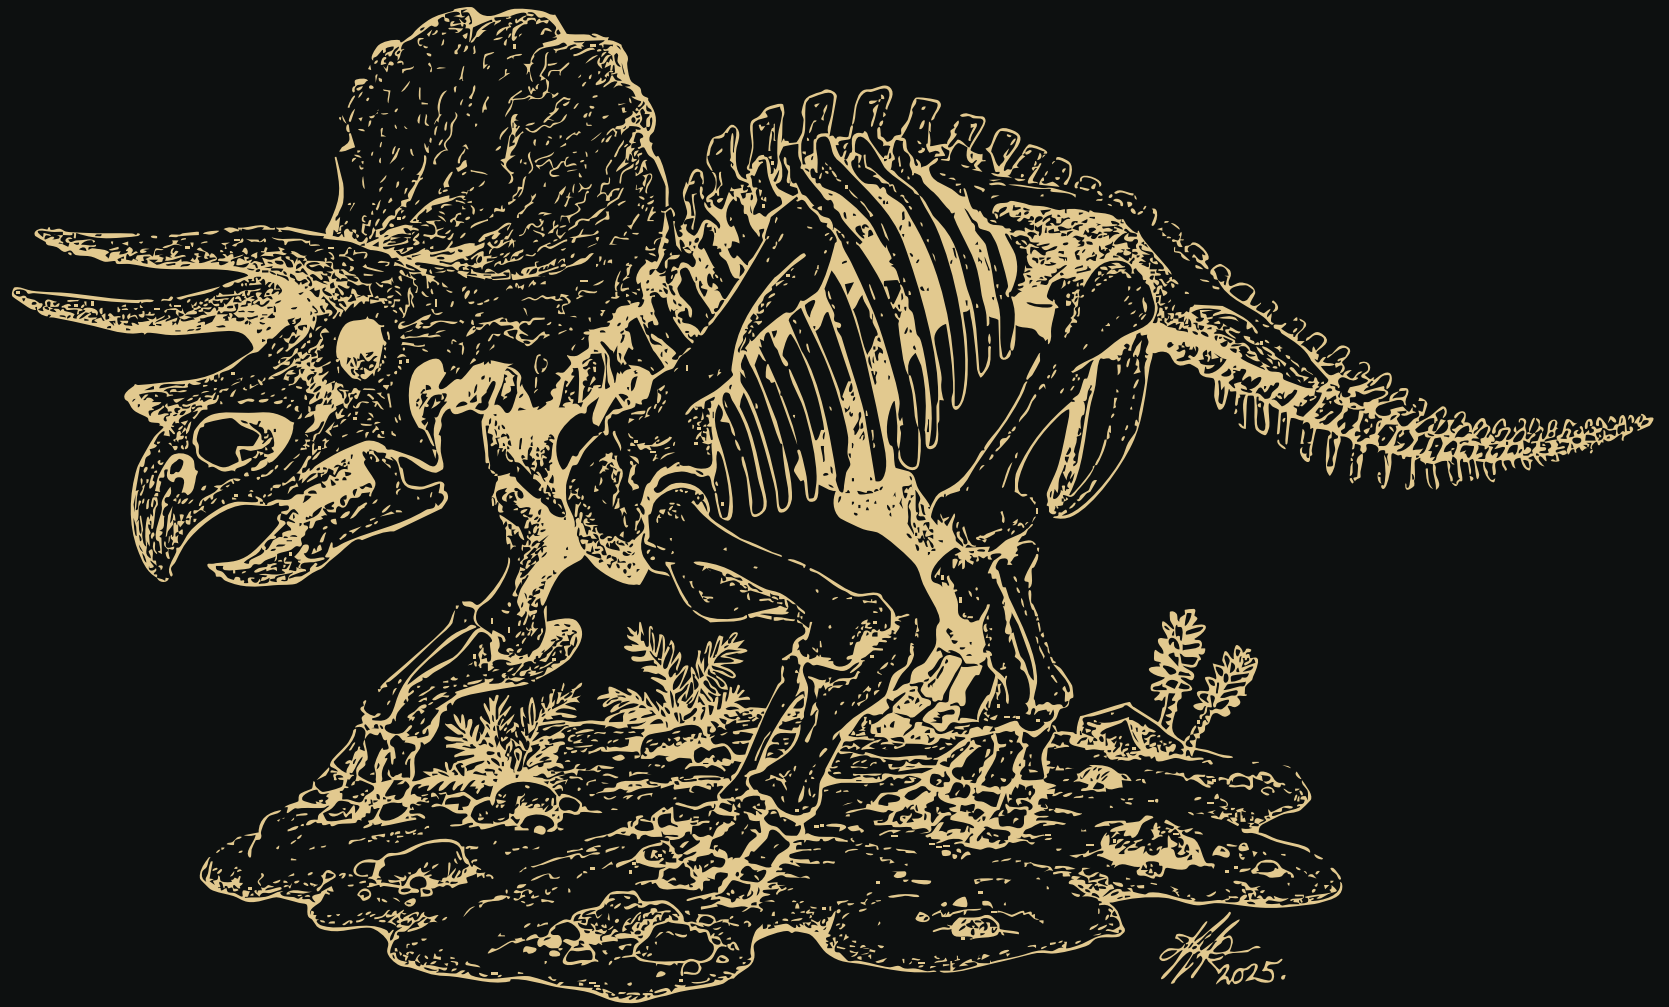

UN GÉANT DE LA SCIENCE ET DU CINÉMA

Le Tricératops est l'un des dinosaures les plus connus grâce à ses squelettes exposés dans les musées du monde entier – et immortalisé à l'écran dans *Jurassic Park* (1993). Dans le film, un Tricératops malade reçoit des soins attentionnés de la part de Dr Ellie Sattler et du vétérinaire du parc, Dr Gerry Harding. Cette scène nous rappelle que ces créatures impressionnantes ont bel et bien existé, évoluant dans un monde ancien qui fut le leur! Reconnaisable à sa large collerette osseuse et à ses trois cornes, le crâne du Tricératops évoluait avec l'âge : les jeunes avaient des cornes recourbées vers le haut, qui s'orientaient vers l'avant à l'âge adulte, tandis que les pointes triangulaires de la collerette se soudaient progressivement en un bord continu. Les fossiles suggèrent même qu'il pouvait tenir tête à un T. rex! Et aujourd'hui, nous sommes fiers de présenter notre version dans la collection LEGO® Jurassic World.

UN GIGANTE DE LA CIENCIA Y EL CINE

Uno de los dinosaurios más populares, el Triceratops, ampliamente conocido por los esqueletos de su especie que exhiben museos de todo el mundo, cobró vida de forma espectacular en *Parque Jurásico* (1993). En la película, un Triceratops enfermo es atendido con ternura por la Dra. Ellie Sattler y el Dr. Gerry Harding, veterinario del parque. La escena nos recordó que estas imponentes criaturas fueron una vez animales reales, ¡capaces de prosperar en su mundo del pasado remoto! Reconocible por su enorme gola y sus tres cuernos, el cráneo del Triceratops se transformaba a medida que crecía: los cuernos de los ejemplares jóvenes se curvaban hacia arriba antes de orientarse hacia adelante al convertirse en adultos, al mismo tiempo que las púas triangulares de la gola se fusionaban en un borde sólido. ¡La evidencia fósil sostiene incluso que podía mantenerse firme frente a un T. rex! De regreso a la época actual, te presentamos con orgullo nuestra versión, parte de la colección LEGO® Jurassic World.

FROM FOSSILS AND MOVIES TO A FUN DISPLAY

Following the 76968 LEGO® Tyrannosaurus rex, we set out to create a scientifically accurate *Triceratops horridus* skeleton. It's fully articulated so you can display it in your favorite pose. Even the jaw opens. At approximately 1:21 scale, this is our first medium-sized LEGO dinosaur skeleton shown in a wetland environment inspired by Late Cretaceous North America, with bits of vegetation it might have eaten millions of years ago. From books, drawings, 3D-computer and resin models, we developed an authentic representation of its shape and posture. We also created a new, longer rib element to solve our biggest challenge: the ribcage. Ten of these ribs are built on rotating connectors attached to the spine to create an accurate shape. From what we know, *Triceratops* most likely lived in small groups, but this one will thrive alone on your shelf!

- The LEGO® Jurassic World Design Team

DES FOSSILES ET DES FILMS À UNE EXPOSITION LUDIQUE

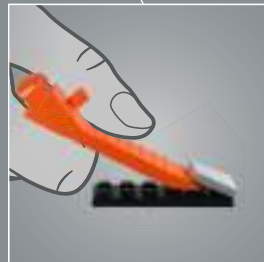

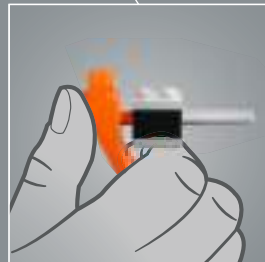

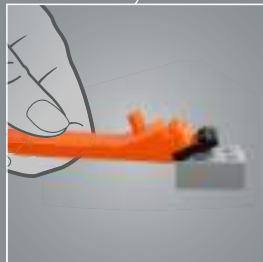

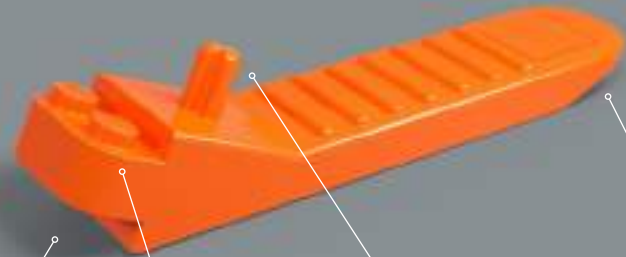

Après le Tyrannosaurus rex LEGO® 76968, nous avons décidé de créer un squelette de *Triceratops horridus* scientifiquement exact. Il est entièrement articulé afin que vous puissiez l'exposer dans votre pose préférée. Même la mâchoire s'ouvre. À une échelle d'environ 1:21, il s'agit de notre tout premier squelette de dinosaure de taille moyenne, présenté dans un décor marécageux inspiré de l'Amérique du Nord au Crétacé supérieur, avec des éléments de végétation qu'il aurait pu consommer à l'époque. À partir de livres, de croquis, de modèles 3D et de prototypes en résine, nous avons conçu une représentation fidèle de sa silhouette et de sa posture. Nous avons même créé une nouvelle pièce de côte allongée pour relever notre plus grand défi : la cage thoracique. Dix de ces côtes sont fixées à des connecteurs rotatifs le long de la colonne vertébrale, ce qui permet d'obtenir une forme des plus réalistes. D'après les connaissances actuelles, le Triceratops vivait probablement en petits groupes – mais celui-ci s'épanouira très bien, seul, sur votre étagère!

- L'équipe de conception de LEGO® Jurassic World

DE FÓSILES Y PELÍCULAS A UN DIVERTIDO MODELO DE EXHIBICIÓN

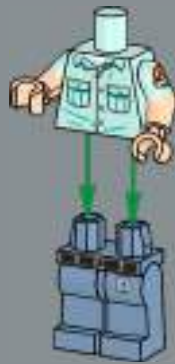

Siguiendo los pasos del modelo LEGO® Tyrannosaurus rex (76968), nos propusimos crear un esqueleto científicamente preciso del *Triceratops horridus*. Decidimos que fuera totalmente articulado para que pudieras exhibirlo en tu pose favorita. Incluso la mandíbula se abre. Con una escala aproximada de 1:21, este es el primer esqueleto de dinosaurio LEGO de tamaño mediano que se exhibe en un entorno de humedal inspirado en la Norteamérica del Cretácico tardío, con trozos de la vegetación que tal vez fuera su alimento hace millones de años. A partir de libros, ilustraciones y modelos 3D tanto digitales como de resina, desarrollamos una representación realista de su forma y su postura habitual. También creamos un nuevo elemento que representa una costilla larga y fue la solución a nuestro mayor desafío: la caja torácica. Diez de estas costillas se insertan en conectores giratorios unidos a la columna vertebral, dando lugar a una figura de gran precisión. Aunque se cree que el *Triceratops* vivía en pequeñas manadas, ¡este seguramente prosperará solito en tu repisa!

- El equipo de diseño de LEGO® Jurassic World
